AT YOUR SERVICE

## HOSES NEED TO BE CLEANED

After a hard fire-fighting your hoses are dirty: mud, sand, grass and carbon black. To protect your vehicle and to keep your hoses into good conditions the hoses need to be cleaned. They also have to be coiled before you put them back on the vehicle.

## THE MULTITALENT

With our new hose-cleaning unit MINI-CLEANER you can treat several tasks: you can clean and coil hoses in the same time. The hoses are cleaned by the help of two strong brushes and water which sprays on the hose by 4 water nozzles while it is torn through the unit.

Special out-side rubber coated hoses will get very clean in that way. The whole unit is fixed on the well-known rolling hose-winder ROLLY which is fixed upside-down in a tripod. The water supply is done by the water-tank of your fire-truck where it is directly connected to.

The hoses are coiled and washed at the scene. For that you simply put the MINI-CLEANER on the tripod of the well-known rolling winder Rolly and connect it with the pressure exit of a fire truck. Then the hoses can easily be coiled with a hand crank, while the hose is drawn through two strong brushes and is cleaned. An additional hand-brush can be used for the cleaning of the couplings or of the boots.

## SMALL AND HANDY

The MINI-CLEANER always finds a spot on every car, its tripod can be folded to extremely small packing measure and also the well-known rolling winder Rolly is a midget.

The MINI-CLEANER can be used without the Rolly as well. For that we have the MINI-WINDER, a special coiler which can be fixed at the mounting ladder of the fire truck. The MINI-CLEANER can also be fixed on the mounting ladder.

Small brush for cleaning couplings

Can also be fixed on rear ladder of a fire-truck

### Mini-Cleaner-Set

(art. no 156 900)

Consists of

### Rolly rolling-winder

(art. no 156 860)

### Mini-Cleaner

(art. no 156 910)

### Tripod for rolling-winder

(art. no 156 915)

### Hand-brush

(art. no 156 920)

optional:

### Winder for mounting ladder

(art. no 156 800)

Hose cleaning unit for fire delivery hoses up to 75 mm (3") diameter

For coiling the layed-out hoses on the ground, for use with Mini-cleaner and tripod

Hose-washing device with 4 water nozzles and 4 cleaning-brushes, 2 of them as splash guard on both sides, water inlet with hose 3/4" 2,5 m long and Geka-coupling

For use with rolling-winder Rolly and Mini-Cleaner, made of galvanized steel, foldable c/w crank for winding

To clean couplings and other material, supplied with connection hose with Geka-coupling

Hose coiler Mini-Winder with hand crank and fixing device for the mounting ladder on the rear of a fire-truck (instead of the rolling winder Rolly)
